CASH FLOW WORKSHEET INSTRUCTIONS

Attached is a "Projected Cash Flow" form. This is used to predict your business performance over the upcoming year. The cash flow should be broken down into a start—up period, twelve monthly periods and a year-end total. Once completed the cash flow should reflect the anticipated seasonality of the business' capital flows for one complete fiscal year. Because your 12-month cash flow attempts to predict future events, you will have to make assumptions in order to estimate you future revenues and expenses. With your list of assumptions you should demonstrate how you arrived at all of the figures you have shown on your cash flow.

- Line 1: Projected Cash Sales
- Line 2: Loans if you take possession of borrowed money during the month, list this cash receipt.
- Line 3: Other funds such as shareholder loans, rent received, sale or other assets. Extraordinary income, etc. should be indicated here.
- Line 5: Sum of lines 1 4
- Line 6-25: Operating expenses enter the amount of the cheques that you write for your monthly expenses. The expense items listed may not be applicable to your business. The headings should be changed so that they are appropriate for your situation. These categories should include items such as: telephone, pager and fax payments, benefits (CPP, EI, WCB), holiday pay, office supplies, etc. This is actual cash outlay for the month. For example, if you write a cheque in January for the full year's insurance, then the amount of the cheque would be put in the January column and nothing would be entered for the rest of the year.
- Line 26: Income tax payments the amounts you expect to pay, if any.
- Line 27: Payments on mortgages/loans indicate the monthly payment for the principal and interest on long-term loans. For example, if you borrow \$3,000 to purchase a truck and monthly payments are \$100 with the first payment due in March then \$100 will be entered in line 19 for each month beginning in March.
- Line 28: Payments on CFDC Loan.
- Line 30: Sum of lines 6 29.
- Line 31: Opening cash balance is the amount of cash at the beginning of the month.
- Line 32: Add the amount from line 5.
- Line 33: Subtract the amount from line 30.
- Line 34: Surplus or deficit for the month cash received minus cash payments.
- Line 35: Closing cash balance is the amount of money you started out with plus (or minus) the amount of cash surplus at the month's end. The closing cash balance becomes next month's opening cash balance. A deficit cash balance indicates the minimum operating line of credit required from your bank to make planned payments.

It is important that the cash flow forecast be revised on an ongoing basis. After each month has been completed, put the actual cash flow forecast figures next to the planned figures and compare them. If the planned figures vary considerably with the actual, it may be necessary to rethink the particular aspects of the business operation.

A cash flow forecast assists in financial planning, inventory purchases and formulating credit and collection policies. It also serves as an early indicator when expenditures are getting out of line. It is one of the most important tools an owner/manager has to control their business.
